Care Summary

Topics Discussed

Thank you for bringing Rocky in to see us today!
Today, we submitted some tests to monitor his renal function after his recent hospitalization for eating some raisin bread. We drew blood to run in-clinic and you may feel or smell some isopropyl alcohol that we use at the site of the venipuncture.

One of our doctors will contact you when the results are available. Please ensure that you have notifications turned on in your app as you will receive one when they are posted to the "Notifications Center" of the app (look for the bell icon in the upper-righthand corner). You can always find Rocky's diagnostics results in the Health Record section of the app under "Diagnostics Summaries".

Don't hesitate to reach out via the Modern Animal app should you have any questions!

Visit Details

Medications prescribed at this visit

Trio Simparica, 44.1-88#/Green - Per Dose
Give 1 tablet by mouth every 30 days for flea, tick, and heartworm prevention. Give with food.

Tests Performed

- RENAL PANEL W/ UA (1361)

In most cases, results for tests submitted to outside labs are available within 3 - 4 business days. Some tests, such as those that involve reading a biopsy or PCR technology, may take between 5 and 10 days. Please ensure that you have notifications turned on in your app as you will receive one when they are posted to the “Notifications Center” of the app (look for the bell icon in the upper-righthand corner). Please be aware that a veterinarian other than the one who recommended this testing may follow up with you on any outstanding diagnostics results, depending on the original doctor’s work schedule and when the test results are available.
