Care Summary

Visit overview

It was a pleasure seeing Rocky today. Rocky came in for an urgent care visit due to persistent diarrhea and some recent episodes of vomiting. We performed a comprehensive exam and provided medication to help with his stomach upset.

Rocky's next steps

Medications:

Rocky has been prescribed Panacur, a dewormer, to be given orally once a day for three days to help with his diarrhea. Additionally, Cerenia tablets have been provided to help with his nausea and vomiting, to be given once daily as needed.

Dietary Management:

Continue feeding Rocky the prescribed gastrointestinal diet to help manage his stomach issues and support his digestive health.

Fecal Testing:

A fecal test has been recommended to check for any underlying causes of the diarrhea that may not have been previously identified.

Sedation for Future Visits:

Due to Rocky's stress and anxiety during visits, sedation prior to future appointments has been recommended to ensure his and the staff's safety.

Follow-up

Please monitor Rocky's condition closely after administering the medications. Please let us know if his signs persist or worsen over the next couple of days. If there is no improvement, we will likely need to consider doing labwork and abdominal imaging (x-rays). If you notice any concerns or if his symptoms do not improve, reach out to our virtual care team for guidance.

Thank you for bringing Rocky in today.

Warm regards,
Dr. Diane Royalty

Visit Details

Medications prescribed at this visit

Panacur C (Fenbendazole), Granules 4gm - per packet
Sprinkle 2 packets over food every 24 hours for 3 days.

Cerenia (Maropitant) 60 mg Tablets (4 Count)
Give 1 tablet by mouth every 24 hours as needed for nausea. Please start as needed.

Tests Performed

- SP - Fecal Dx +/- Giardia, Hook/Round/Whip AG (24639)

In most cases, results for tests submitted to outside labs are available within 3 - 4 business days. Some tests, such as those that involve reading a biopsy or PCR technology, may take between 5 and 10 days. Please ensure that you have notifications turned on in your app as you will receive one when they are posted to the “Notifications Center” of the app (look for the bell icon in the upper-righthand corner). Please be aware that a veterinarian other than the one who recommended this testing may follow up with you on any outstanding diagnostics results, depending on the original doctor’s work schedule and when the test results are available.
