Care Summary

Topics Discussed

Rocky was seen today for soft stool and ingestion of feces on a walk. We are running a fecal to screen for parasites.

I have sent home Pro-Pectalin to help firm up his stools.

Add in some of the Purina EN canned for the next few days and continue his probiotics.

Other Recommendations

We recommend bringing Rocky in for periodic "happy visits". During these visits, we feed Rocky treats while letting him walk around the clinic at his own pace. The goal of these visits is for Rocky to develop a positive association with the clinic and our staff. No appointment is needed for these visits, but sending a message giving us a heads up that you are on the way is helpful! For more information about "happy" visits, tap this link: [Happy Visits](#)

Medications prescribed at this visit

Pro-Pectalin Tablets
Give 3 tablets by mouth every 12 hours for 5 days.

Trio Simparica, 44.1-88#/Green - Per Dose
Give 1 tablet by mouth every 30 days for flea, tick, and heartworm prevention. Give with food.

Tests Performed

- SP - Fecal Dx +/- Giardia, Hook/Round/Whip AG (24639)

In most cases, results for tests submitted to outside labs are available within 3 - 4 business days. Some tests, such as those that involve reading a biopsy or PCR technology, may take between 5 and 10 days. Please ensure that you have notifications turned on in your app as you will receive one when they are posted to the “Notifications Center” of the app (look for the bell icon in the upper-righthand corner). Please be aware that a veterinarian other than the one who recommended this testing may follow up with you on any outstanding diagnostics results, depending on the original doctor’s work schedule and when the test results are available.

SOAP

Subjective

Nurse initials: Clo Reason for visit (please write a concise blurb): Rocky has had soft stool since O's went on a hike over the weekend where he drank some of a puddle. Eating and drinking water normally, no lethargy and eating and drinking well. O's report that they had a friend's dog staying with him that he's known his entire life and Rocky was marking in her kennel. Wanted to know if there is anything they can do to navigate that behavior. Diet: Orijen large breed kibble Is this a grain-free diet? no Lifestyle (indoors/outdoors, socialization): Hiking and Attitude/Energy: Normal Coughing: None Sneezing: None Vomiting: None Diarrhea: Soft stool Appetite: Normal Water consumption: Normal Urination: Normal Current medications and current dose: Probiotic Current parasite preventive: Trio Any history of vaccine reactions: No Recent travel or upcoming plans to travel? No Medication refills needed: Trio Have you visited another hospital/facility since your last visit at MA? No

Objective	<p>Normal Nose Moist/clean, no discharge or lesions noted</p> <p>Normal Oral Normal adult dentition noted, no gingivitis/tartar appreciated; no masses</p> <p>Normal Otic No discharge or erythema noted in canals AU; TM's visible and intact AU</p> <p>Normal Heart No murmurs or arrhythmias auscultated; femoral pulses strong and synchronous</p> <p>Normal Abdomen No pain, masses, or organomegaly palpated</p> <p>Normal Integument No ectoparasites, masses, or skin lesions noted</p> <p>Normal Ophthalmic No ocular discharge, erythema, or blepharospasm OU; normal fundic exam OU</p> <p>Normal Urogenital Kidney margins are smooth/regular; no discharge noted</p> <p>Normal Respiratory Eupneic; normal bronchovesicular sounds all lung fields</p> <p>Normal Reproductive External genitalia compatible with in tact status</p> <p>Normal Musculoskeletal No lameness or muscle atrophy noted; no pain on spinal palpation</p>
